Introduction

This newsletter covers the activities of the Warwickshire Fungus Survey during 2014 as recorded by the group members and although its primary purpose is to present the mycological records, other articles and contributions would be welcome. The records generally concern the foray programme but non-foray records from individuals and other groups have also been included where they represent a new site record or an unusual / interesting occurrence. Where available, habitat and substrate information has been noted and observers are urged to record this important data whenever possible.

Reminder: Would forayers submitting dried specimens for the herbarium please ensure that they are accompanied by notes, particularly of characters that cannot be checked from dried material. These include, for agarics, fresh colour and any colour changes with age, handling or bruising and changes to the flesh colour when the fruitbody is longitudinally sectioned; is the cap and or stem viscid, sticky?; peelability of the cap (*Russula*), milk colour and changes on drying (*Lactarius*); smell; taste. Also please provide a spore print and details of the literature consulted in arriving at a determination.

Species names have generally been taken from the *Checklist of the British & Irish Basidiomycota* (N. W. Legon, A Henrici *et al*) and the British Mycological Society's computerised dictionary of fungus names (GBCHKLST, 27.03.04). Where this name differs from older names and is not yet in common usage, the older name is indicated in brackets for the first mention. In certain cases where species have been 'lumped' the original name is listed for future clarity. Note that updates 1 to 6 to the above checklist are now available at website <http://www.basidiochecklist.info>. References to the *Flora* relate to Clark, M. C. (1980) *A Fungus Flora of Warwickshire*.

The WFS website may be accessed by address <http://wfs.bnhsoc.org.uk>.

* indicates new to site. Up-to-date lists are not available for all sites.

** indicates new to vice-county 38.

The following recorders have been identified by their initials and are shown in the sequence collector/determiner/confirmer (where different):

DJA	David Antrobus	DG	Dinah Griffin	RJS	Jane Sells
JA	Janet Antrobus	WTM	Bill Moodie	JDS	John Sells
AWB	Bert Brand	KP	Karen Pobgee	GT	Graham Thompson
GMB	Gill Brand	KR	Kay Reeve	JW	John Williams
DC	Dave Champion	JRR	John & Val Roberts		

Unless stated otherwise the following plant/tree species may be inferred from their genus:

Genus	Species	Genus	Species
Aesculus	<i>Aesculus hippocastanum</i>	Fagus	<i>Fagus sylvatica</i>
Alnus	<i>Alnus glutinosa</i>	Fraxinus	<i>Fraxinus excelsior</i>
Castanea	<i>Castanea sativa</i>	Ilex	<i>Ilex aquifolium</i>
Chamerion	<i>Chamerion angustifolium</i>	Rubus	<i>Rubus fruticosus</i> agg.
Corylus	<i>Corylus avellana</i>	Taxus	<i>Taxus baccata</i>
Crataegus	<i>Crataegus monogyna</i>	Urtica	<i>Urtica dioica</i>

WARWICKSHIRE FUNGUS SURVEY

Foray Programme

2014

It was yet another strange year. After a wet spring, the early summer drought resulted in few fungi during September and once again the mycorrhizal species suffered most. However, the rains did come and with minimal frost the season lasted well albeit with the more common species.

Knavenhill Wood

11.05.14

Fourteen attended the first foray of the year on a chilly, blustery morning, but at least the rain kept off. All records are in woodland unless stated otherwise.

MYXOMYCETES

Lycogala terrestris on rotten *Betula* KR/DJA

PHYCOMYCETES

Peronospora conglomerata (A) on *Geranium dissectum* (JRR), GMB
(new host) trackside

Peronospora viciae (A) on *Vicia sepium*, trackside GMB

ASCOMYCETES

Lachnum fuscescens on *Quercus* fallen leaf GMB
Scutellinia scutellata WTM

Gnomonia setacea on *Quercus* fallen leaf GMB//Peter Thompson
Hypocrea pulvinata on *Piptoporus betulinus* AWB
(moribund fruitbody)

Leptosphaeria acuta on dead stem *Urtica* AWB
Xylaria hypoxylon fallen branch AWB

HOMOBASIDIOMYCETES

** *Flammulaster muricatus* on large cut deciduous stump (probably *Fraxinus*) AGARICALES etc.

Psathyrella candolleana JRR/DJA

Bjerkandera adusta DG

Hymenochaete rubiginosa APHYLLOPHORALES

Piptoporus betulinus on dead standing birch trunk WTM

Schizopora paradoxa on fallen branch DJA AWB&DG

Stereum hirsutum on fallen branch JDS

Stereum rameale on dead standing *Quercus* JDS

HETEROBASIDIOMYCETES

Auricularia auricula-judae on rotten wood TREMELLALES etc.
DC

UREDINIOMYCETES

Gymnosporangium sp. (O) on *Crataegus*, living leaf, trackside GMB

GMB comments: species not identifiable at this stage but a record at this date is of interest.

Blythe Valley

17.08.14

ASCOMYCETES

** *Cistella aconiti* on *Heracleum sphondylium*, near base of dead upright stem DISCOMYCETES

Taphrina tosquinetii *Alnus* sucker shoot AWB/Peter Thompson
HEMIASCOMYCETES

Venturia maculiformis *Epilobium hirsutum*, living leaf GMB
LOCULOASCOMYCETES

Whitacre Heath Nature Reserve SSSI

19.10.14

After some confusion over the car park improvement seven set out to foray on a pleasant morning but despite the recent rain there were very few fungi to be found. The name 'heath' is misleading as the majority of the reserve is in the flood plain of the River Tame with wetland trees such as willow, alder and birch.

This foray was cancelled.

Brueton Park

16.11.14

There was another good attendance at this popular Solihull park where finding a car parking space is not easy. Several members found a convenient side road cul-de-sac where a number of interesting fungi were present on the mossy grass verge with mature pine trees. The only dampener was the unexpected downpour towards the end of the morning.

Ashlawn Road Nature Reserve

Melanotus horizontalis	on cut <i>Salix</i>	DC	29.11.14
------------------------	---------------------	----	----------

Baddesley Clinton National Trust

** <i>Conocybe cf moseri</i>	on manured soil in a garden bed	DJA	07.08.14
------------------------------	---------------------------------	-----	----------

DJA comments: the *Conocybe* must fit into the complex around *C. moseri*; however the fruitbodies were rather large for var. *moseri*, being up to 35mm diameter compared with maximum 20mm in the books. There is a var. *robustior* but the microscopic characters did not fit. So I will deposit the collection in the herbarium as *Conocybe cf moseri*.

** Gyromitra esculenta	<i>Pinus sylvestris</i>	DC	10.04.14
Boletus legaliae		DC	03.08.14
Laccaria amethystina	grass under larch	DC	27.09.14
Laccaria laccata	grass-path	DC	27.09.14
Macrolepiota konradii	pathside, mixed woodland	JDS	27.09.14
Pseudoboletus parasiticus	on <i>Scleroderma citrinum</i>	JDS	27.09.14
Pseudoboletus parasiticus	on <i>Scleroderma citrinum</i>	KP	05.10.14
Russula ionochlora	broad-leaved woodland	JDS	27.09.14
Tricholoma fulvum	lawn with <i>Betula</i>	JDS	27.09.14
Cantharellus cibarius	large group, grass-path	DC	27.09.14
Xerocomellus chrysenteron	under <i>Pinus</i>	JDS	27.09.14

Palmers Rough (SP1279)

** Lepiota ignivolvata	<i>Ilex</i> amongst grass	JW	05.10.14
------------------------	---------------------------	----	----------

Snitterfield Bushes

Crepidotus cinnabarinus (with <i>C. mollis</i>) (SP201607)	wet, rotten <i>Populus tremula</i>	JRR	22.08.14
--	------------------------------------	-----	----------

JRR comments: it is fascinating to be able to report another site for *Crepidotus cinnabarinus*. This was on the eastern side of the main circuit a few feet only off the track. As ever it grew on wet, rotting aspen, with *C. mollis* on the same trunk. We noted almost no other fungi showing in the Reserve, neither on soil or wood, so what triggered the relatively early production of these fruitbodies?

Abortiporus biennis	buried wood	DC	31.08.14
Cortinarius (Sericeocybe) alboviolaceus	broad-leaved woodland	JDS	13.09.14

WARWICKSHIRE FUNGUS SURVEY

Cortinarius (Telamonia) torvus	broad-leaved woodland	JDS	13.09.14
